1．A force acting on an object moving along the x axis is given by $F_{x}=\left(14 x-3.0 x^{2}\right) N$ ，where x is in m ．How much work is done by this force as the object moves from $\mathrm{x}=-1 \mathrm{~m}$ to $x=+2 \mathrm{~m}$ ？
（A）+12 J
（B）+28 J
（C）+40 J
（D）+42 J
（E）－28J．

2．Which of the curves in the right graph best represents the vertical component $v_{y}$ of the velocity versus the time t for a projectile fired at an angle of $45^{\circ}$ above the horizontal？
（A）OC
（B） AE
（D） DE
（E）AF．

3．The coefficient of static fiction between the block and the cart is 0.5 ．If the mass of the block is m ，what is the minimal acceleration of the cart to prevent the block from falling？
（A） g
（B） 0.6 g
（C） 0.3 g

4．A rotating wheel requires 3.00 s to rotate through 37.0 revolutions．Its angular speed at the end of the $3.00-\mathrm{s}$ interval is $98.0 \mathrm{rad} / \mathrm{s}$ ．What is the constant angular acceleration of the wheel？
（A） $13.7 \mathrm{rad} / \mathrm{s}^{2}$
（B） $12.7 \mathrm{rad} / \mathrm{s}^{2}$
（C） $11.7 \mathrm{rad} / \mathrm{s}^{2}$
（D） $10.7 \mathrm{rad} / \mathrm{s}^{2}$
（E） $9.7 \mathrm{rad} / \mathrm{s}^{2}$ ．

5．A thin ring of mass $M$ and radius $R$ rotates about an axis through its edge．The ring starts at its highest point and is given a very small push to start its rotation．Its angular position velocity at the lowest point is
（A）$\sqrt{2 g / R}$
（B）$\sqrt{3 g / R}$
（C）$\sqrt{4 g / R}$
（D）$\sqrt{5 g / R}$
（E）$\sqrt{6 g / R}$ ．（The parallel－axis theorem $I=I_{c m}+M h^{2}$ ）

6．A speedboat moving at $20.6 \mathrm{~m} / \mathrm{s}$ sounds a signal on its horn，producing a tone of 320 Hz ．There is no wind，and the speed of sound in air is $329 \mathrm{~m} / \mathrm{s}$ ．The apparent frequency of the sound heard by an observer in another boat moving in the opposite direction and approaching the first at a speed of $15.4 \mathrm{~m} / \mathrm{s}$ is
（A） 282 Hz
（B） 287 Hz
（C） 316 Hz
（D） 357 Hz
（E） 369 Hz ．

7．The relation $P V=n R T$ holds for all ideal gases．The additional relation $P V^{\gamma}$ holds for an adiabatic process．The figure below shows two curves：one is an adiabat and one is an isotherm．Each starts at the same pressure and volume．Which statement is correct？（Note：＂$\propto$＂means＂is proportional to＂．）
（A）Isotherm ：$P \propto \frac{1}{V} ;$ Adiabat ：$P \propto \frac{1}{V}: \mathrm{A}$ is both an isotherm and adiabat．
（B）Isotherm：$P \propto \frac{1}{V^{\gamma}} ;$ Adiabat：$P \propto \frac{1}{V}: \mathrm{B}$ is an isotherm， A is an adiabat．

（C）Isotherm：$P \propto \frac{1}{V} ;$ Adiabat：$P \propto \frac{1}{V^{\gamma}}: \mathrm{A}$ is an isotherm， B is an adiabat．
（D）Isotherm：$P \propto \frac{1}{V^{\gamma}} ;$ Adiabat：$P \propto \frac{1}{V^{\gamma}}: \mathrm{B}$ is both an isotherm and an adiabat．
（E）I cannot answer this without additional information about the starting temperature．
